L3 ANSWER 1 OF 2 CAPLUS COPYRIGHT 2003 ACS

AB Modulators of **NET-4** are provided that reduce the expression or biol. activities of **NET-4** or the expression of **NET-4** mRNA in a mammalian cell. **NET-4** modulators include antisense mols., ribozymes, antibodies and antibody fragments, proteins and polypeptides as well as small mols. **NET-4** modulators find use in compns. and methods for decreasing **NET-4** gene expression as well as methods for inhibiting the proliferation of mammalian cells, including tumor cells, and methods for treating neoplastic diseases.

L3 ANSWER 2 OF 2 CAPLUS COPYRIGHT 2003 ACS DUPLICATE 1

AB The tetraspans are components of large mol. complexes that include also non-**tetraspan** mols., in particular integrins. We have identified and sequenced several new members of the **tetraspan** superfamily, called NET-1 to NET-7 (new EST **tetraspan**). Sequence anal. of the NET reveals a structure typical for tetraspans, with the presence of four transmembrane domains delimiting two extracellular regions as well as conserved amino acid residues. The NET are differentially expressed in human cell lines.
